

# What do you think life will be like for kids 100 years in the future?

I think life for kids 100 years in the future will be more advanced. There will probably be new gaming systems for them to use. They could even have new shoes that transport them anywhere they want to go.

**Nathan Hughes, 7th, Jonesville Middle, Mrs. Brooks**

Kids 100 years in the future will be lucky. There will be flying cars racing across the sky. Teleporters will be teleporting people all over the world and even robot cats and dogs. No more allergic reactions. You will finally pet your cat as long as you want. Instead, it is robotic. You may say you like things the way they are. Well, you are actually wrong. New technology can help us a lot. Like no more traffic. No more being late and no more waiting for food. Like I said kids 100 years in the future are lucky.

**Jack Litton, 4th, Miller Perry Elementary, Ms. Jeffers**

Children in 100 years may have many things that kids do not have now. They may have more technological advances. New pieces of technology are made every day. There have been millions of improvements in the technology field over the past few years alone. Many could only expect more ideas and improvements over the next 100 years.

**Hannah Couch, 8th, Surgoinsville Middle, Mrs. Hensley**

In 100 years kids will be a lot different. I think kids will stay home and do their schoolwork on the computer. They will play on the computer with their friends. They will be able to fly around to get from place to place. In the future, kids will play tag by flying around outside and tagging each other. Life will be very different for kids in the future.

**Lily Cordery, 2nd, Hilton Elementary, Mrs. Edwards**

There will be tech everywhere. Also, I think we will not be on Earth any longer. Since we have people starting an exploration to Mars, there will be an atmosphere to live in. I think that people will have floating cars and nothing called gravity in 100 years. Also, I think phones will be outdated and will not exist any longer.

**Trevor Chapman, 7th, Holston Valley Middle, Mrs. Taylor**

I think 100 years in the future the technology will be better to where students don't have to do schoolwork. The students would have a robot to do their work for them. If a child's parents are not home—don't worry, there is a robot to take care your child. The robot can cook, clean, and keep your child safe.

**Subrina Eldridge, 5th, Jonesville Middle, Mrs. Austin**

I think the world for kids would change a lot and I think the kids themselves would change. Maybe future people will find a way to float and then the kids would get to float. Maybe people will find out how to make floating screens or it would just be touchscreen with everything. Electronics might actually change or even take over the world! I also can see Earth changing too. I think it would look bad with all the litter. Maybe they will find a way to get rid of it so it might change positively. I hope that happens!

Toys would come to an end in the future, it might just be rare to get one, or kids would stop playing with them and go on their phones 24/7. I don't know, but I think kids would care less because of electronics in the future but maybe someone will care!

**Olivia Fraley, 4th, Miller Perry Elementary, Ms. Jeffers**

You know that saying history repeats itself? Well I think scientists are going to find a way to make dinosaurs like in Jurassic Park. The dinosaurs will be kept in a high-tech park and kids will be able to go see them. That's what I think life will be like for kids 100 years from now.

**Anthony Harley, 7th, Holston Valley Middle, Mrs. Taylor**

I think life in the future for kids will be amazing. I don't think they will have to go to school because the president will change it. The president will be the child of one of the people that are my age now.

**Hannah Jones, 6th, Jonesville Middle, Mrs. Jones**

In 100 years kids do not have toy cars.

**Brayden Davis, Kindergarten, Hilton Elementary, Ms. Howe**

Have you ever wondered about what would happen in 100 years? Well, here is what I think. I think there will be space trains were you could go to a different galaxy. I think that there will be hover cars. I think there will be a microchip were you could know everything. That's what I think will happen in 100 years.

**Timothy Bonsor, 4th, Miller Perry Elementary, Ms. Jeffers**

100 years in the future, life for kids will be very different. To be forthright, I believe Virtual Reality (VR) will be very big in the future. To go more in depth, it will change everything from entertainment to education. Kids will be able to sit on a virtual couch with a friend across the world and laugh together at a comedic film or cry together at sad movies. This could be great for friends of kids who moved. It could give them a way to "hang out" without physically being together. Kids will also be able to immerse themselves into beautiful environments. In the

educational field, kids could digitally dissect a frog and study its inner organs without the mess that this could usually cause (or the gagging). Kids could strap on a VR headset and watch a recreation of Lincoln giving the Gettysburg Address. This could vastly improve education for kids. While most of this is possible with today's technology, VR technology is not very widespread. I believe that VR technology will (hopefully) be more advanced and widespread in the future. Virtual Reality is the future.

**Landon Fritts, 8th, Surgoinsville Middle, Mrs. Hensley**

I think life will be fun because there will be a lot of stuff invented by then—like flying cars and new shoes that most likely will have a boost or something. I will not be around to see it but it will be cool that my future son or daughter will be able to see it. Just think about the cars, the shoes, and the schools because of the technology.

**Travis Eldridge, 5th, Jonesville Middle, Mrs. Austin**

In 100 years kids will play with mermaids. **Shelby Balthis, Kindergarten, Hilton Elementary, Ms. Howe**

I think the technology will be cool because there could be boats with a drone controlling the boat. There could be robot arms. There could be an automatic house builder. The future is going to be awesome.

**Nicolas Reed, 4th, Miller Perry Elementary, Ms. Jeffers**

If we do not start caring about global warming and the pollution of Earth, our children will grow up in an environment with no animals, plants, forests, clean oceans, or any nature for that matter. This is what human life will be like.

**Katelyn McGlothlin, 7th, Holston Valley Middle, Mrs. Taylor**

I think life for kids 100 years in the future will be advancing with new technology. There might be flying cars. That would cost a lot now, but in the future be the price of your average car. PlayStations and Xboxes could possibly be folded in your pockets. They might have robotic referees so there would be no missed calls.

**Tanner Epperly, 7th, Jonesville Middle, Mrs. Brooks**

One hundred years from now I think kids will be able to drive vehicles. If they don't pay good attention, they might wreck. The only car that would be good for them is a Beetle. It would be good for them because Beetles are small. That is what I think it would be like for kids 100 years from now.

**Trevor Light, 2nd, Hilton Elementary, Mrs. Edwards**

In one hundred years from now, I think life for kids would be easier. We wouldn't have any school, kids would live on Planet Mars, and we wouldn't be told to do chores every day. There would also be better McDonald's restaurants and there would be no laws.

**Dalton Miles, 6th, Jonesville Middle, Mrs. Jones**

I think the schools will all be electronic so they do everything on computer and there will be no paper and pencil. Their houses will be different. Everything will be electronic and there will be robots.

**Madysen Doss, 7th, Holston Valley Middle, Mrs. Taylor**

100 years from now we will have robots to do everything for us.

**Elijah Vermillion, Kindergarten, Hilton Elementary, Ms. Howe**
